Art Unit: 2834

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10-13 and 68-73 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brunnee in view of Ogawa (264) or Ogawa (057).

Brunnec teaches the claimed device but using only a single layer of piezo electric material. However, use of multiple layers of peizo metal to increase output and lower impedance is well known as taught by Ogawa. Note Ogawa also teaches electrode inter connections are made on end faces of the piezo or internally. It has long been held that optimization of a known deice (e.g. thru routine experimentation) is within the skill expected of the routineer. Thus, selection specific dimensions would have been obvious to one of ordinary in the art.

Claims 3, 4 and 6-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brunnee in view of Ogawa as applied to claim 8 above, and further in view of Scarpa or Keem.

These claims that the piezo/thin film interface is roughened. Each of Kolm and Scarpa teach providing rough interface surfaces to form a stronger joint.

Application/Control Number: 09/672.069

Page 3

Art Unit: 2834

Thus for at least this reason it would have been obvious to one of ordinary skill in the art to roughen the piezo/thin plate interface of Brunnee.

Claims 14-31 are allowed.
